

Grupo Energía de Bogotá joins the World Energy Day celebration

- It's been 120 years since electrical energy arrived in Bogota because of GEB.

The World Energy Day is celebrated on February 14 –a meaningful date to reflect on the relevance of energy for the development and quality of life of all of the world's inhabitants.

In an increasingly changing world with increasingly greater challenges to generate clean energies from renewable sources, the efforts made by energy companies being responsible for the management of an energy matrix thought in terms of sustainable development of territories, have become particularly interesting.

120 years ago, Grupo Energía de Bogotá (GEB) envisioned bringing energy to Bogota for progress; and it is today one of the major players in the energy matrix in Latin America –being one of the few business groups with presence throughout the value chain through its three Strategic Business Groups, both in electrical energy generation, transmission and distribution and in natural gas transportation and distribution in Colombia, Peru, Guatemala and Brazil.

GEB holds a 23% market share in energy generation and keeps working on finding new renewable energy opportunities in countries in the energy matrix transition to this sustainable, low emission source.

Today, GEB is the leader in the execution of new expansion projects for the National Transmission System (STN, acronym in Spanish), with a 42.1% share represented by eight projects in 19 being currently executed. It also holds a 18.2% share in projects of the Regional Transmission System (STR, acronym in Spanish).

As regards the natural gas business, the Group holds 84.6% and 65.4% market shares in Colombia in natural gas transportation and distribution, respectively; while in Peru, it has presence in the distribution market with 71.3%.

Astrid Álvarez, Grupo Energía de Bogotá CEO, highlighted that: “On the World Energy Day we are celebrating that over these 120 years of history, Grupo Energía de Bogotá has contributed to Colombia's growth and development as well as those of countries where it operates, becoming the major electrical energy and natural gas multilatinas in the region to keep bringing comfort to millions of citizens”.

Grupo Energía de Bogotá will continue to expand its presence in the Latin American energy matrix, ratifying its lead through its three Strategic Business Groups: Urban Energy Solutions; Interconnection for Market Development; and Low Emission Generation.

About Grupo Energía Bogotá

El Grupo Energía de Bogotá (GEB), led by Empresa Energía de Bogotá, is a joint-stock company listed in the Colombia Stock Exchange, the main purpose of which is to generate, transmit, distribute and trade energy, gas and combustible liquids in any form.

Today, Grupo Energía de Bogotá is the major electrical energy and natural gas multilatina across the region, with presence in Colombia, Peru, Guatemala and Brazil. It acts as a “strategic connector”, focused on three Business Groups:

- **Urban Energy Solutions**, looking to develop and operate the required infrastructure to meet the electrical energy and natural gas demand in large cities;
- **Interconnection for Market Development**, a business responsible for connecting energy generation sources to consumption mega-centers and large users; and
- **Low Emission Generation**, looking for new renewable energy opportunities in countries in the energy matrix transition to this sustainable, low emission generation source.

By 2025, Grupo Energía de Bogotá will be the non-mining company with the greatest profits in the Colombian market, while its companies will generate income greater than COP 35 billion from operations in multiple Latin American countries, being consolidated as the most valuable group in the Latin American Integrated Market (MILA).
