

## Press Release #4

### NATURAL GAS TRANSPORTATION INFRASTRUCTURE EVENT IN COLOMBIA'S COUNTRYSIDE IS FINALLY SOLVED

**Bogotá, D.C. Friday, June 22, 2018.** Transportadora de Gas Internacional, TGI, informs that repair works carried out in the Cusiana – Miraflores section, located at the Páez Municipality, Boyacá Department, led to the reestablishment of the system' operational conditions and to the normalization of gas transportation to the countryside from the Cusiana and Cupiagua production fields.

The process to normalize services in the sectors that reported any kind of restrictions is being coordinated with distributors, leading to the reestablishment of gas transportation services for the Natural Gas Vehicle sector, first, and the industrial sector, a few hours later.

We would like to extend our gratitude to the inhabitants and authorities of Páez for their collaboration; to the Governor of the Boyacá Department and Mayor of the Páez Municipality, whose management was instrumental in overcoming this event. Also, is it worth noting the engagement of the National Police, the National Army, the Departmental and Municipal councils for Disaster Risk Management and by all the entities that supported us throughout this event.

We also want to express our gratitude to the Ministry of Mines and Energy, the National Council for Natural Gas Operations (CNO-Gas), OCENSA, ECOPETROL, CHEVRON and the distributors from the country's interior for their steadfast collaboration, as well as to the unions and associations for their support and solidarity.

We want to extend our special gratitude to the industrial sector and to users of the Natural Gas Vehicle sector for their solidarity with the region's residential population.

Lastly, we wish to acknowledge the efforts made by TGI's collaborators and contractors to solve the situation, preserving people's lives and integrity.

We move forward, safely.

**About TGI S.A. ESP.**

Transportadora de Gas Internacional S.A. ESP –TGI-, a subsidiary of Grupo Energía Bogotá, is Colombia's largest gas transportation company with nearly 4,000 kilometers in gas pipelines, which cover the country's most populated areas, including Bogotá, Medellín, Bucaramanga, the Coffee Growing Axis and the Plains Foothills. In addition, it operates and maintains Colombia's largest gas pipeline network and the natural gas transportation to the interior of the country.
